

# GLUE GUIDE

## CBC.T | CBC.TPM

To ensure proper machine performance, **only pellet glue with an operating temperature between 180°C and 210°C (356°F to 410°F) should be used.**

Do **not** use glue with temperatures **above 210°C (410°F)** or **below 180°C (356°F)**. Using glue outside this range may prevent the machine from operating correctly and can cause damage.

**⚠ Important:** Damage caused by the use of incorrect glue may result in the warranty being voided.

### Recommended Glues

For best results, we recommend the following pellet glues:

Jowat (ref. 288.60)  
Process Temp 180 - 200°

Kleiberit (ref. 773.3)  
Process Temp 180 - 200°C

**Any other pellet glue brand**  
that meets the required temperature range of  
**180°C to 210°C (356°F to 410°F)**

### Need Assistance?

If you have questions about glue compatibility, setup, or operation, please contact our **Technical Support Team**. Our specialists are ready to help you select the correct glue and ensure optimal machine performance.
